

Ladies and Gentlemen!

For one hundred years Science was under the spell of that equation:

$$x^2 + y^2 + z^2 - V^2 t^2 = \xi^2 + \eta^2 + \zeta^2 - V^2 \tau^2$$

I think I may say now: The spell is broken, „*Medusa is decapitated*“, the enigma is solved, the *right* equation must be:

$$x^2 + y^2 + z^2 - V^2 t^2 = \xi^2 + \eta^2 + \zeta^2 - \Phi^2 \tau^2$$

with the corresponding *right* transformation – the *Streibig-* or *Chyron-transformation*:

$$\begin{array}{ll} \Phi = \sqrt{V^2 - 2 \frac{x}{t} v + v^2} & v = \sqrt{\Phi^2 + 2 \frac{\xi}{t} v + v^2} \\ \xi = x - vt & x = \xi + vt \\ \eta = y & y = \eta \\ \zeta = z & z = \zeta \end{array}$$

Not *space & time* are relative, but the *velocity of light* is relative!

Space & time remain – thank God! – what they are.

Einstein's theories of relativity are just science-fiction.

Science having paused for one century – like *turned into stone* – can go on at last!

Since the beginning of January 2004 my paper with the simple title *Transformation* – in which I presented the *right* solution of that *kinematic* problem concerning the propagation of light, in direct coherence with that equally known *quantum theoretical* problem – is put forward to a great number of German and foreign research institutions and universities, among them the universities of Hamburg, Bochum, Cologne, Tübingen, Frankfurt/Main, Erlangen-Nürnberg, Stuttgart, Munich, Vienna, Oxford, Cambridge, Paris (Sorbonne), the Werner-Heisenberg-Institute Munich, the Max-Planck-Institute für Gravitationsphysik Golm b. Potsdam, the European Research Center CERN.

Berlin, February 6th, 2004

Georg Ernst Streibig alias Chyron
